日本海底捞为了顾客太拼了

Starting from Next Auth

```
import NextAuth from "next-auth"
import GithubProvider from "next-auth/providers/github"

export const authOptions = {
  providers: [
    GithubProvider({
      clientId: process.env.GITHUB_ID,
      clientSecret: process.env.GITHUB_SECRET,
    })
  ],
}

export default NextAuth(authOptions)
```

Next Auth

- 解决了用户会话 (user session)
- 简单方便对接到next.js
- 数据库无关
- 支持多种OAuth (Google、GitHub、Twitter)

Why not Next Auth?

- Next.js 强绑定，Auth.js 至今鸽了
- 看不懂的文档
- 繁琐的定制化
- 没有类型

Better Auth

- 提供多种的登陆方式

```
export const auth = betterAuth({  
  database: new Pool({  
    connectionString: DATABASE_URL,  
  }),  
  emailAndPassword: {  
    enabled: true,  
  },  
});
```

Better Auth

- 自定义Schema, with TypeScript support

```
import { betterAuth } from "better-auth";
import Database from "better-sqlite3";
export const auth = betterAuth({
  database: new Database("database.db"),
  user: {
    additionalFields: {
      role: {
        type: "string",
        input: false,
      },
    },
  },
});
type Session = typeof auth.$Infer.Session;
```

```
npx @better-auth/cli@latest generate
npx @better-auth/cli@latest migrate
```

Better Auth

- 插件系统

```
import { betterAuth } from "better-auth";
import { organization } from "better-auth/plugins";

export const auth = betterAuth({
  plugins: [organization()],
});
```

Better Auth

- Framework Agnostic
- Built-In Rate Limiter

Better Call (tiny web framework)

- create endpoint
- built-in middlewares
- schema validation

```
import { createEndpoint } from "better-call"
import { z } from "zod"

export const createItem = createEndpoint("/item", {
    method: "POST",
    body: z.object({
        id: z.string()
    })
}, async (ctx) => {
    return {
        item: {
            id: ctx.body.id
        }
    }
})
```

Better Fetch

- Universal Fetch Client
- Hooks
- Schema Validation

```
import { z } from 'zod'; // or your preferred Standard Schema compliant library

const { data: todos, error: todoError } = await betterFetch("https://jsonplaceholder.typicode.com/todos/1", {
  output: z.object({
    userId: z.string(),
    id: z.number(),
    title: z.string(),
    completed: z.boolean(),
  })
});
```

Roadmap

- Better Client SDK
- `npx auth init`
- UI components
- More plugins
 - electron support
 - OAuth 2.1 server support
 - ...
- Better Auth Enterprise
 - AI
 - Cloud
 - Dashboard

Infra
